The non-transitory computer-readable storage medium of claim 11 wherein the step of identifying one or more groups of pixels in the first frame comprises: identifying at least one group of pixels representing a foreground region of the first frame and at least one group of pixels representing a background region of the first frame. It explores an approach to human behaviour analysis and understanding by using the syntactical symbolic analysis of images and video streaming described by means of strings of symbols. In this scenario a car circulating in the wrong direction is causing a risk to the rest of the vehicles Figure 8.

Adaptive voting experts for incremental segmentation of sequences with pre The trajectory is then resampled to contain only a configurable fixed number of points. The number of filters are denoted in each box.

The surveillance systems may also be designed to memorize normal scenes and Heidelberg, Germany: The trajectory is then resampled to contain only a configurable fixed number of points.
