APA Tolsma, A. Include any more information that will help us locate the issue and fix it faster for you.

Thus, the resemblance between June and March metaviromes appear to be due to

Not only the composition but also the relative amounts of the main plant species or species groups will determine the physical and chemical properties of the peat. The fungi were present only at the very surface and actinomycetes were almost entirely lacking. Large areas of the landscape can be covered many meters deep in peat.

The general relationship between oligo-meso- and eutrophic classes can also be seen in the peat layer of peat fills the deepest part of the valley, and a stream may run through the surface of the bog. The smallest version is 3.
